
Structure Flow
Predict the Actives support
Dental Inputs
Maxillary / Mandibular,
Preparation, Margin, FDI
Multiscal Dental Encoder
PointMLP + source embedding
Global pooling voxel refinement
Condition tokens
Gobal condition
Coarse voxel tokens
$x^S(t)$
Noisy latent
Aligned injection
Cross-attention
Structure DiT
Time-modulated sel-attention
Dental Cross-attention
Feed-Forward
V^S
ODE Solver
Velocity
Integration
Frozen Decoder
Structure decoding
Occupancy selection
Active
Support
$\hat{O}$
Feature Flow
$S = \hat{O}$
Generate local latent feature
Condition Fusion
Residual Injection
Global condition
Voxel readout at q
Local modulation
Neighbor Geometry
Axial Occupancy
Linear maps
Local MLPs
Input adaptation
Cross-attention
Gobal condition
Coarse voxel tokens
Fused
Tokens
Feature DiT
Sparse self-attention
Dental Cross-attention
Time modulation
V^F
ODE Solver
Velocity
Integration
Local
Features
$\hat{F}_q$
$\hat{Z} = (\hat{O}, \hat{F})$
$x^F(q,t)$
